Summary

Computer Engineering student and independent game developer specializing in Unity, C#, and mobile game development. Founder of Zenitra Games, with hands-on experience designing, developing, testing, and publishing mobile games, including Rocket Surge, Traffic King, and Arrows: Puzzle Maze. Skilled in gameplay programming, procedural level generation, UI/UX design, performance optimization, and Google Play Store deployment. Experienced in managing the complete game development lifecycle, from initial concept and prototyping to release and post-launch updates. Also interested in software engineering, cybersecurity, and embedded systems, with a strong focus on creating engaging and technically robust digital experiences.

Professional Experience

02/2026 – Present
Muğla, Türkiye

Zenitra Games
Founder & Independent Game Developer

- Founded Zenitra Games and independently developed three mobile games: Rocket Surge, Traffic King, and Arrows: Puzzle Maze using Unity and C#.
- Designed and implemented gameplay mechanics, procedural level generation, progression systems, and responsive UI/UX.
- Optimized mobile performance, physics systems, and gameplay stability for Android devices.
- Managed the full game development lifecycle, including prototyping, testing, debugging, Google Play Store deployment, and post-launch updates.
- Integrated advertising and in-app purchase systems, utilizing AI-assisted development tools to improve productivity and code quality.

07/2025 – 08/2025
Ankara, Türkiye

Computer Engineering Intern
Ziraat Teknoloji

- Gained hands-on experience in enterprise-level software development processes and corporate IT infrastructure.
- Participated in agile development cycles, contributing to team meetings and collaborating with experienced engineers on project requirements.
- Assisted in analyzing codebases, debugging issues, and understanding secure software design principles within a large-scale financial technology environment.

Education

09/2022 – Present
Muğla

Muğla Sıtkı Koçman Üniversitesi

Skills

- Unity
- C#
- UI/UX Design
- Python
- Java
- Penetration Testing

Projects

Rocket Surge (Mobile Arcade Game)
Developed and published a fast-paced mobile arcade game using Unity and C#. Implemented responsive movement mechanics, obstacle systems, level progression, and speedrun features. Optimized gameplay performance and UI for Android devices while managing testing, Google Play Store deployment, and post-launch improvements.

Traffic King (Mobile Driving Game)
Designed and developed a mobile traffic-driving game using Unity and C#. Built vehicle movement systems, dynamic traffic behavior, collision detection, and endless gameplay mechanics. Focused on optimizing mobile performance, physics calculations, and object management. Implemented vehicle customization, progression systems, and monetization features to enhance player engagement.

Arrows: Puzzle Maze (Mobile Puzzle Game)
Designed, developed, and published a mobile puzzle game on Google Play using Unity and C#. Implemented seed-based procedural level generation, puzzle-solving mechanics, difficulty progression, daily challenges, and player reward systems. Developed a customizable visual experience with themes, effects, and unlockable content. Integrated advertising and in-app purchases while managing Android builds, release testing, store optimization, and post-launch monitoring.
